**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Dan Scola, Jr. on 3/1/06.

The application has been amended as follows:

In the claims, in claim 18, line 7, "e." has been changed to --c.—and in line 9, "f." has been changed to --d--.

Claim 29 has been canceled.

In the title, "and apparatus" has been deleted.

***Reasons for Allowance***

2. The following is an examiner's statement of reasons for allowance:  
regarding claims 1 and 10, the prior art of record does not teach or fairly suggest a method of manufacturing a graft wherein placing two fusible materials in an overlapping configuration on a shape forming member, forming a seam to form an expandable channel in the overlapped portion, expanding and fixing the channel while it is expanded wherein the channel is collapsible after the fixing.  
Regarding claim 18, the prior art of record does not teach or fairly suggest a method of manufacturing a graft by overlapping a first fusible material and a second fusible material, forming a seam to form an inflatable channel in the

overlapped portion, expanding the channel and fixing it while expanded, wherein the channel is collapsible after fixing. Regarding claim 30, the prior art of record does not teach or fairly suggest a method of manufacturing a graft by placing two fusible materials in an overlapping configuration on a mandrel, and forming a seam to form an expandable channel in the overlapped portion, wherein the mandrel has a middle section smaller than the end sections. Regarding claim 34, the prior art of record does not teach or fairly suggest a method of manufacturing a graft by placing two fusible materials in an overlapping configuration on a shape forming member, and forming a seam to form an expandable channel in the overlapped portion, the pressure line which inflates the expandable channel comprising a tubular member with a plurality of apertures whose cross-sections increase in size along the tubular member. Regarding claim 50, the prior art of record does not teach or fairly suggest a method of manufacturing a graft by placing two fusible materials in an overlapping configuration on a mandrel, forming a seam to form an expandable channel in the overlapped portion, expanding the channel and sintering it while it is expanded. Sintering is a process that occurs at extremely high temperatures and therefore would not occur when the graft is within the human body. Fixing the channel is considered to form it to the desired shape such that absent pressure the channel remains expanded, i.e. the channel is set in that shape and remains in that shape absent external actions.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should

preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
